August 28, 1962

Close resemblance of the Canadair CL-41R advanced systems trainer to the Canadair CF-104 supersonic tactical airplane is emphasized by this air-to-air view. The CL-41R provides systems training for pilots at a fraction the cost of using expensive operational aircraft. It is the first jet trainer to carry the full range of NASARR systems for CF-104 and F-104G aircraft. The CL-41R is based on the CL-41A pilot trainer of which 190 are being built by Canadair for the Royal Canadian Air Force.
